

Some benefits:

- extremely quick sieve and knife change
- _ no need to adjust the rotor knife
- _ performance-enhancing diagonal cut
- very quick and easy to clean
- ideal granulate quality, similar grain
- high performance with low energy requirement
- outer bearing assembly fitted, dust protection
- **CE** certified

series 450

Working width 600-1.200 mm

Rotor diameter 450 mm

Motor output 22-75 kW

Number of rotor knives

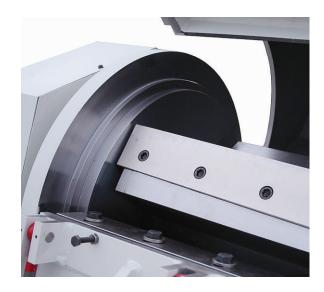

Number of stator knives

Rotor speed 490 r.p.m.

Nominal weight appr. 2.800 kg

Grinding output appr. 650-2300 kg/h

Heavy duty granulators for hollow bodies and voluminous parts High performance for voluminous parts and high throughput

The Hellweg 450 series granulators enable gentle and thorough granulation of voluminous and large surface area plastic parts such as bumpers from the automotive industry or parts dismounted from old cars like plastic tanks, door interior claddings, canisters etc on account of the real helical scissors-cut and the high moment of gyration of the massive rotor that is made from one solid piece of metal. In connection with a 7-knives rotor also higher material outputs can be reached as a central application. Sheets, pipes, profiles and thick-walled mouldings, etc can also be granulated in a save way.

M 600/450 detail rotor and bearing flange

Hellweg granulators hold **Pole-Position**

Hellweg Maschinenbau constructs machinery and equipment in its own production facilities, including especially setting up of systems for specific customer tasks, for customers in the plastics and recycling industries throughout the world. The production range covers machine-side mills, granulating mills, edge strip granulators, edge strip feeding equipment, film shredders, as well as extraction and dust removal plant including accessories.

series 450

High performance granulators for voluminous parts and high throughput Processing of large surface area plastic parts, sheets, pipes and profiles

Hellweg granulators are used by plastic processing companies to compound thermoplastic waste arising from production – especially engineering thermoplastics such as ABS, PA, PBT, PC, POM, but also PE and PP, involving dosing of ground material again with virgin material during running production, or addition of the material in another application at a later stage. The material to be handled falls into the cutting chamber of the Hellweg granulator via a guiding chute and is repeatedly shredded by cutting between rotating and fixed knives, until it passes an attached sieve as ground material. The sieve extends over the lower half of the grinding chamber and is exchangeable. This enables appropriate sieve perforation to be used for the particle size required.

The machines may be supplied optionally with soundproofed cabins and a noise absorbing feeding chute.

Characteristics:

- highly precise production, heavy welded housing
- _high throughput at low drive power
- wear resistant versions for reinforced plastics
- _ direct mounting of the knives on solid rotors produced from one solid piece of metal, no imbalance and eliminating need for rotor knife adjustment
- _ structural design for easy, complete cleaning through absence of dead corners
- high performance direct drive through transmission belts
- special sieves guarantee constant grain sizes

Model / Size	Working width	Rotor - Ø	Motor output		stator knives	Rotor speed	Nominal weight	Grinding output
M 600/450	600	450	22 - 30 kW	3 - 7	2	490 r.p.m.	1.800 kg	appr. 650-1.300 kg/h
M 1200/450	1.200	450	30 - 75 kW	3 - 7	2	490 r.p.m.	3.400 kg	appr. 1.000-2.300 kg/h

Under reserve of technical changements.

After a brief agreement, simply send us a sample of the material to be granulated. We will then select a suitable granulator for your application and carry out trial granulation. We will then receive the result returned in the form of granulate for your examination, without any obligation on your part.
